Research Assistant vacancy “Genes, Genealogy and the evolution of demographic change and social inequality” GENPOP ERC Project, University of Bologna

We are looking for a Researcher to join the research project “Genes, Genealogy and the evolution of demographic change and social inequality”, Acronym GENPOP. The project is funded by the European Research Council (ERC), with Prof. Nicola Barban as the principal investigator. More information is available at <http://www.genpop.org> or <https://cordis.europa.eu/project/id/865356>.

Project description

The aim of the project is to study a range of related questions on the long-term evolution of demographic processes in family networks from 1800 until today by using existing micro-census data and internet-based genealogies. Demographic change and inequality mark modern society, making indispensable the understanding of demographic processes and the planning of effective policies essential. As demographic processes evolve slowly across generations, the combination of historical with current data can help in understanding the process of population evolution. The EU-funded GENPOP project will investigate long-term demographic processes in family networks from 1800 until today by using existing data on internet-based genealogies. It will use innovative Big Data and micro-census data to examine fertility and mortality in family networks and diversity between and within families across generations, to understand the impact migration had on the different generations and to delineate the long-term models of assortative mating.

Within this framework, GENPOP offers a **12-month** at the University of Bologna, Department of Statistical Sciences.

Responsibilities

The post holder will be expected to participate fully in the research life of the research group, and engage in advanced independent research within the remit of

the project. More specifically, the appointed researcher will be involved in the following tasks:

- a) Data cleaning and preparation**
- b) Data analysis,**
- c)** Represent the research group at internal and external meetings/seminars and present papers at conferences and public meetings;
- d)** Participate in the research activities of the GENPOP project and the Department of Statistical Sciences;
- e)** Undertake appropriate administrative/organisational duties within the group when required such as organizing research meetings, conference sessions and reporting to the funders;

Selection criteria

Applicants should hold a Master Degree, (or be close to completion), in statistics, sociology, demography, economics, computer science or another relevant discipline. Training and expertise in analysing secondary data, strong quantitative analysis skills are essential.

The University of Bologna

The Alma Mater Studiorum University of Bologna stands for quality research and education connecting past and future. Not only is Bologna the oldest university in the Western world, but it also scores among the three top Italian universities for both research and education. Hosting a remarkable amount of European-funded research grants, internationalization is an important part of the University's strategic agenda. The research offices of the University of Bologna provide highly specialized support for ongoing international grants, as well as for new grant acquisitions. Thanks to this arrangement, talented researchers are given scope for developing groundbreaking research in a liberal environment.

Last but not least, with one fifth of its population made of students, a thriving entrepreneurial scene and an enviable quality of life, Bologna is one of the most
